LIBSPACE

PROJECT DOCUMENTATION

INTRODUCTION

PROJECT TITLE: LIBSPACE

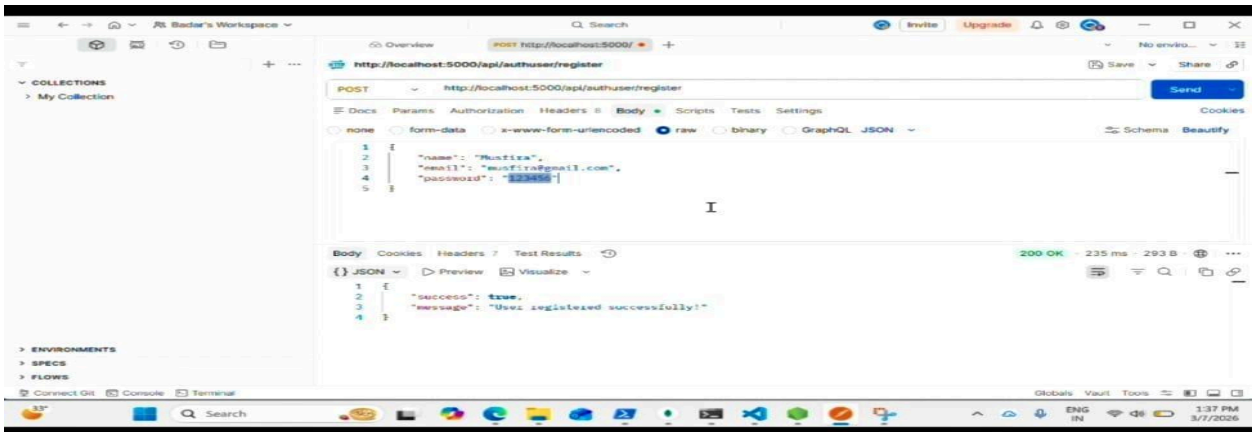
TEAM MEMBERS:

1. **BADAR MUSFIRA.A**
2. **KANIMOZHI.P**
3. **HEMAPRIYA.K**
4. **DILSHATH BANU.A**

API IMPLEMENTATION SCREENSHOTS:

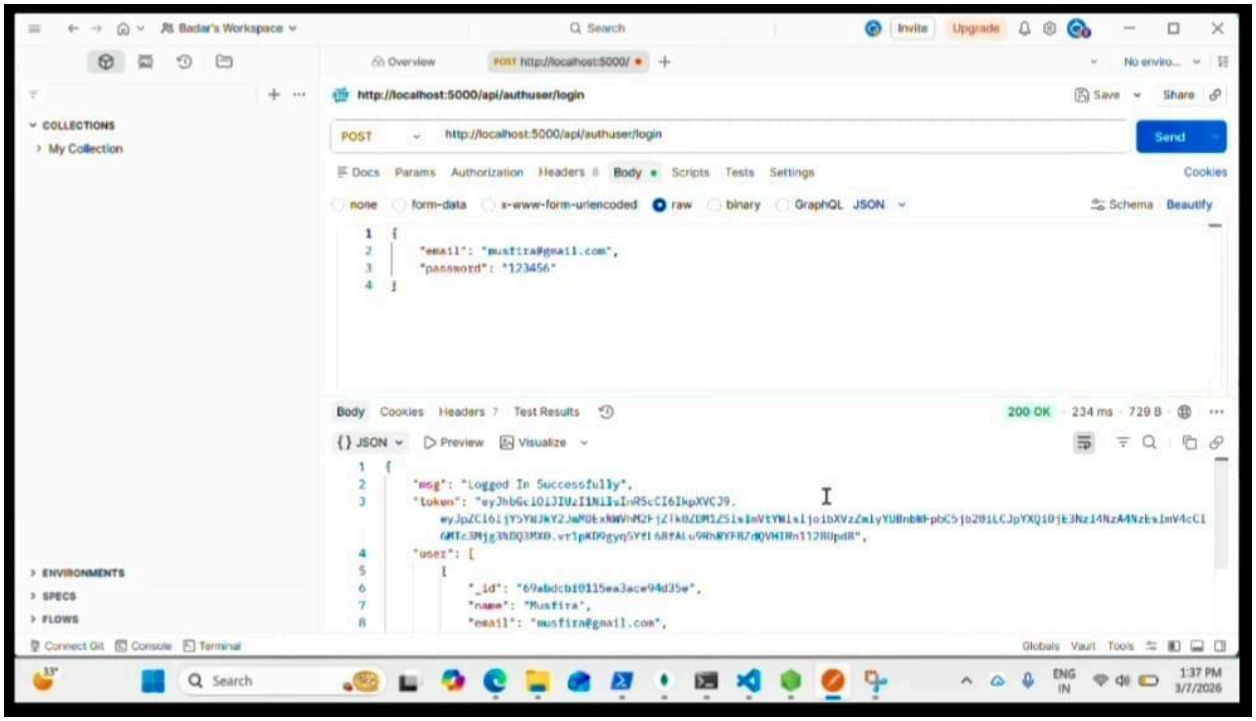
The following screenshots demonstrate the successful execution of Libspace APIs using Postman in Visual Studio Code, showing the request body and corresponding server responses.

1.USER REGISTRATION API:



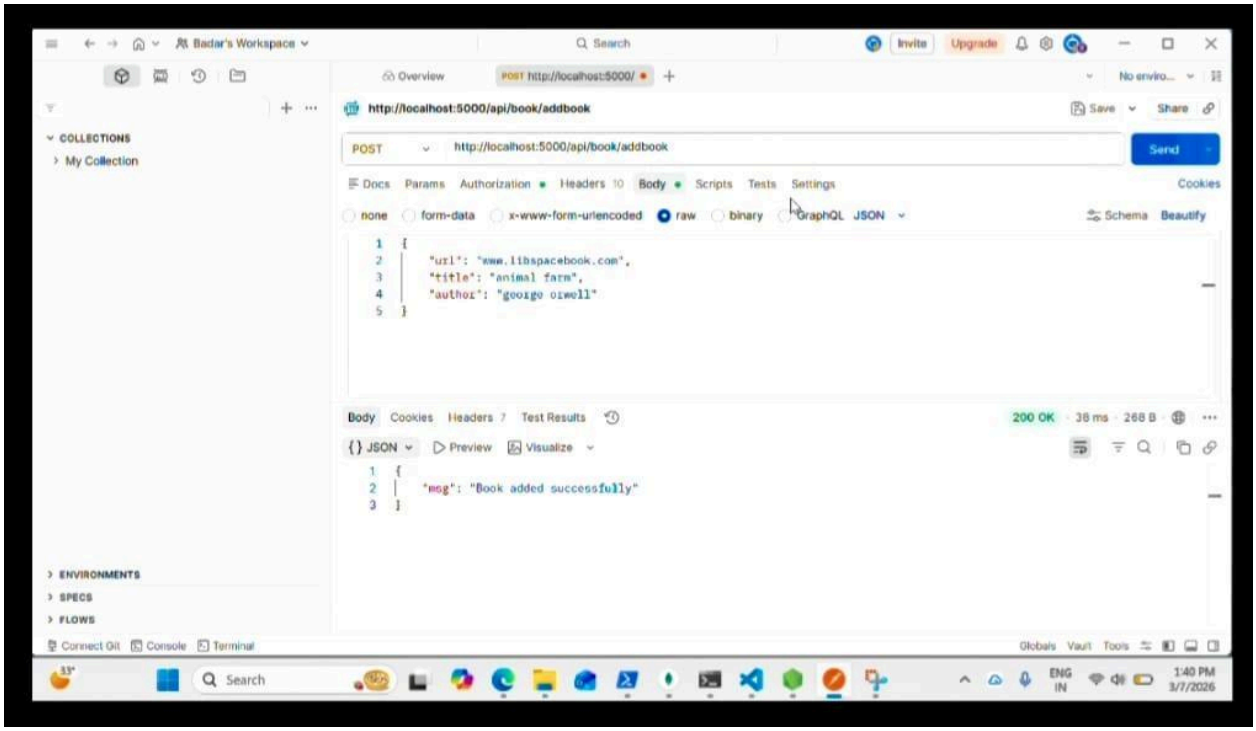
- This API allows a new user to create an account in the Libspace.
- The user provides name, email, and password in the request body.
- After providing the registration details the server response with successful registration.

2.USER LOGIN API:



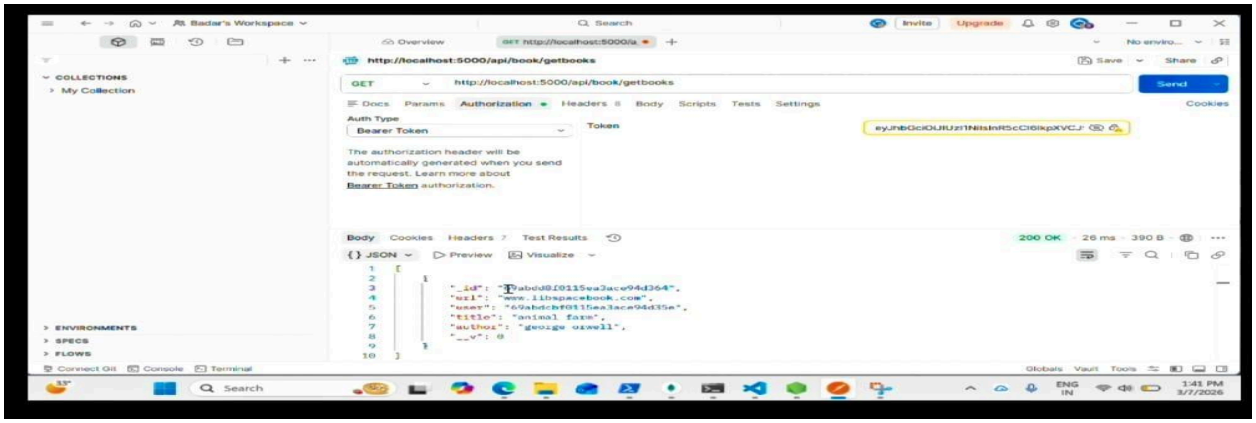
- After registering into libspace account,the user should login into the Libspace.
- The user provides email and password in the request body.
- If the credentials are valid, the system returns a JWT authentication token and user
  details, which will be used for
  accessing protected APIs.

3.ADDING BOOK:



- **The API allows the user to add new book to the system.**
- **The request body includes details like url, title and author.**
- **After successfully adding the book ,it is stored in the MongoDB database and returned in the response**

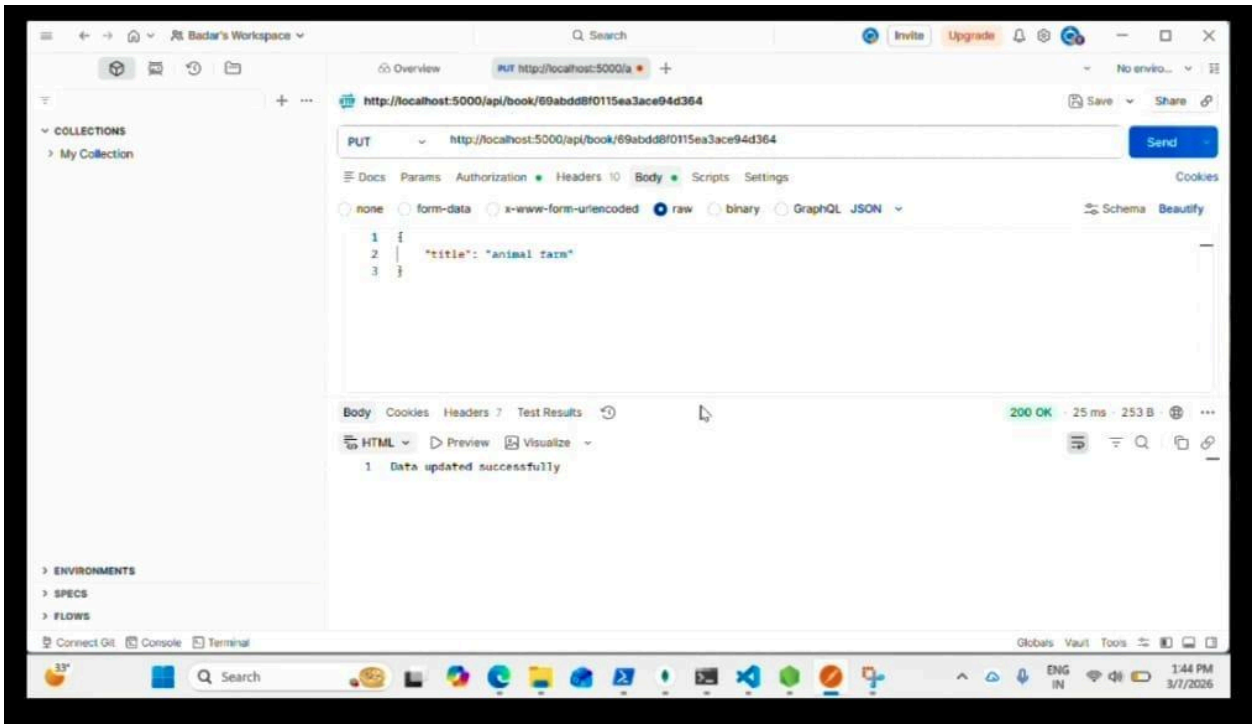
4.GET ALL BOOKS:



- **This API allows to get the added books from the database.**

- **It provides the id of the book added in the database**

5.UPDATE BOOK:

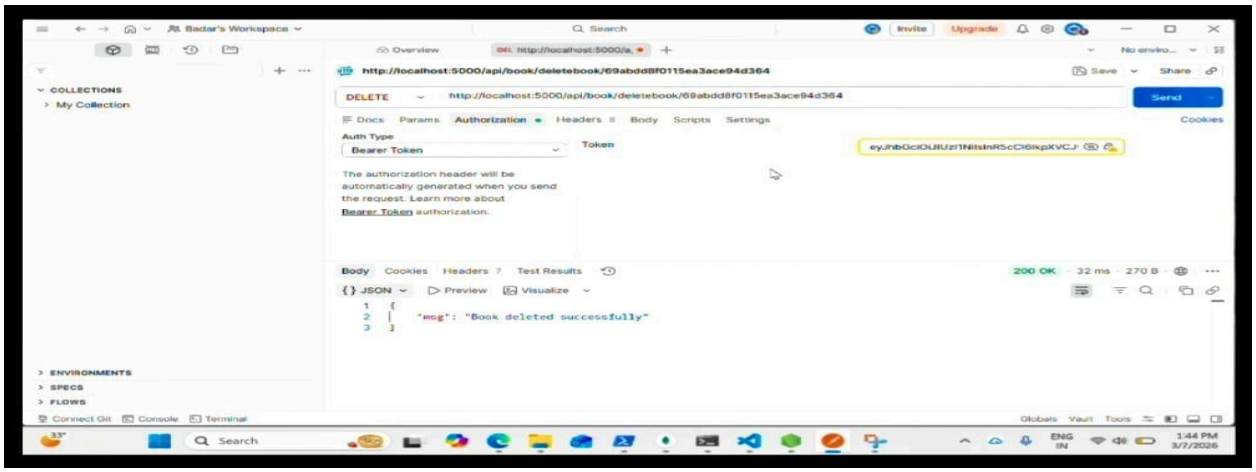


- **This API allows the user to update the details of an existing book.**

- **The book is identified using the id of the book.**

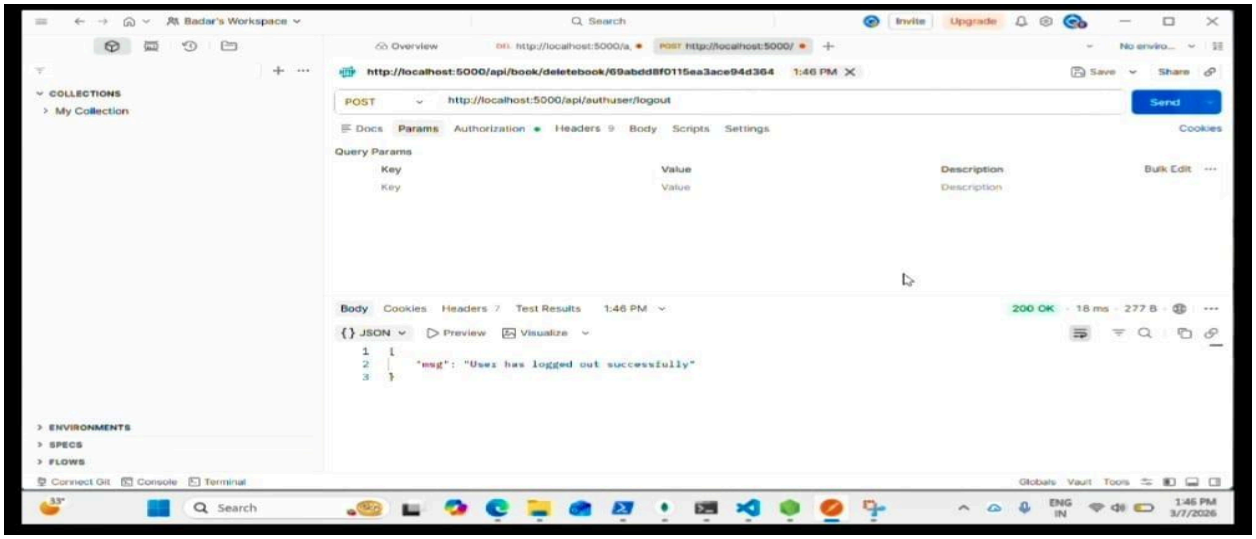
- **The updated detail 'title' is successfully saved in the database.**

6.DELETE BOOK:



- **This API allows the user to delete a book in Libspace.**
- **The book is identified by the book id.**
- **Once deleted, the system returns the confirmation message 'book deleted successfully'.**

7.USER LOGOUT:



- **This API allows a user to logout from Libspace account.**
- **After the user logged out,it returns the message 'user has logged out successfully '.**
